

# CFD BETTING EDUCATION

## HOW MUCH CAN YOU WIN

The more accurate in your predictions, the better chance to win big. The profit increases exponentially with each round. Consequently, the value of your CFD can increase dramatically if you are good.

**The payout is calculated as follows**

The CFD value is calculated by the ratio between your index and the site index in each round, multiplied by the initial value of your CFD. These values are multiplied exponentially for each round in the current league.

*Example*

You buy your CFD before the first round. *You pay 100 Euro*, which is 10 percent of the real value. Your CFDs real value is 1,000 Euro, which is the value the profit is calculated on. Your CFD in this example applies to the English Premier League with 38 rounds. You are 25 percent above the *Site Index* by an average after the last round. Only a few other CFDs are above the index. Your CFD expires, so what can its potential value be?

**Calculate as follows**

Round	CFD Value	Above Index
1	1,250	25%
2	1,562	25%
3	1,953	25%
4	2,441	25%
----	----	----
38	4,814,825	25%

**Your invested 100 euros after 38 rounds is worth over 4,8 million euro in the example.**

Note that the limit on how much a CFD can be worth consists of how much has been invested in each league in total and the number of CFDs that beat the Site Index.

**HOW CFD BETTING WORKS**

You select a series, arrange the table, predict the matches. If you beat the index, you will make money. It's all against everyone, no mysteries or secrets. It's purely mathematical. Beat the average and you win. How much you earn depends on how you stand against the Site Index.

## HOW THE INDEXES WORKS

**Your CFD Index** works like this: you get 100 percent accuracy if you have placed a team in the right place. For each incorrect placement, the accuracy is reduced in relation to the total number of teams. The accuracy of your match predictions is calculated on the TOTAL number of matches played so far (gross). Not on how many matches YOU have played (net). The value of your CFD index is calculated on the total accuracy of your gross predictions and how exactly you arranged the league. A CFD purchased after round 1 gives a certain deduction in percentage points on your index for each round until the round of your entry. The percentage can vary depending on the league. The percentage can also change during the current league, if it turns out to give an advantage to enter late in the game.

**The Site Index is affected** by the average of all CFDs in the current league, both tables and predictions count.

Predict the results in each round and maximize the chance to win big in your CFD. Every correct prediction counts in the end. For that reason, you do not want to miss a bet on a match!

## HOW THE CFD VALUE IS CALCULATED

The current CFD value is calculated by the ratio between your index and the site index in each round, multiplied by the initial value of your CFD. These values are multiplied exponentially for each round, from the first (1) to the current round. Your CFD closes automatically when the last match in the last round has been played and the final result has been reported. Then you get the real and final value of your CFD. Loans, interest and rake are deducted and the remaining amount is balanced against your account.

## HOW TO BUY YOUR CFD

[Video help](#)

- **1. Click New Bet in the menu or » [HERE](#) «**
- **2. Select series**  
Note! You can buy as many CFDs in the same series as you like
- **3. Arrange the series table**  
According to how you think the table will look after the last match in the final round.
- **4. Predict the individual matches**  
You do not have to play all the matches immediately. Every match can be played single, half and fully covered.  
You can play a match up to 1 hour before the start.  
You can always change results in matches that have at least 1 hour left until the start.

Note! A league is playable until 30 % remains of the total rounds.

## HOW CAN I DEPOSIT MONEY?

You pay with credit card at one of our supported exchange sites. Your money will be converted from BTC to EUR at the current exchange rate. When the transaction is completed, you will see the money in your Exer wallet and you are ready to start betting on the games. Fees from the payment provider may apply. Please note that the exchange can take 5-30 minutes.

[Deposit](#) money with credit card at one of our partners.

## WHAT YOU BUY AND HOW YOU MAKE MONEY

**You pay only 10 percent** of the real value of your CFD. The Indexes changes with every match and are based on everyone else's CFDs. Arrange the table as you think it will end when the last match is played in the final round. In step two, you predict how each match ends, with 1, X or 2. These two parameters affect your CFD. If your accuracy is better than the Site Index, you will probably make money. The higher up, the more you can earn. After each match in every league, you can follow a chart of how your CFD is doing. The limit on how much a CFD can be worth consists of how much has been invested in each league in total and the number of CFDs that beat the Site Index. Expired CDFs are valued as a percentage depending on success.

## WHAT DOES IT COST

You pay only 10 percent of the value of your CFD. But all profits you make on your CFD is based on 100 percent of the value. This means that you are granted a loan of the remaining 90 percent. On the loan, you pay an annual interest rate of 5 percent. Because a CFD normally expires within a year, i.e. a football season, you will probably not pay the full interest amount. In order for you to never notice the loan, a micro-payment is made automatically every day (the value of CFD x 5% / 365 days). On the deposited and withdrawn values there can be a one-time management fee (rake) of 0 percent.

## IS THERE ANY RISK

For every point the percentage of the instrument moves in your favour, you gain multiples of the value of the CFD you have bought or sold. For every point the percentage moves against you, you will make a loss.

Betting and making money are always a risk. Unlike all other betting sites, you only risk 10 percent of your bet on CFDs minus the rake. But if you win, you win 100 percent, minus the loan, interest and rake. In other words, you also win on the money you did not risk. But remember, as with all CFD trading, initially you have coverage of a maximum of 10 percent, i.e. if your actual payment is more than 10 percent below the Site Index then your CFD risks ceasing. To prevent this, you need to deposit additional Euro to cover the greater difference. This can happen, for example, if there are large fluctuations in the table at some point during the season, teams winning or losing that you did not predict. If you think this is only temporary, you can avoid ending your CFD by paying an additional 10 percent of the value of your CFD. Then your loan-to-value ratio is 80 percent and you have coverage to go 20 percent below the index.

## THIS IS HOW CFD WORKS

**Contract For Differences** (CFD) gives investors the opportunity to take advantage of movements in accuracy of predicting results. It is a relatively simple calculation of the prediction's movement between entry and exit. It only calculates the change without regard to how accurate accuracy you achieve. This is achieved through an agreement between customer and broker and does not use any stock, currency, commodity or futures exchange. Trading CFDs offers several major benefits that have increased the huge popularity of the instruments over the last decade.
